

RESUME

ATANU BHOWMICK

Software Developer | Data Analyst and Engineer |
Graphic Designing | Automation Engineer

B.TECH GRADUATE WITH KNOWLEDGE OF FRONTEND, BACKEND, DATA STRUCTURE AND ALGORITHM, APIS, JAVA AND PYTHON KNOWLEDGE OF ABOUT 7-8 YEARS, WITH KNOWLEDGE OS CUSTOMES DEMAND,WORKING INDEPENDENTLY AS BUISNESS DEVELOPEMENT EXECUTIVE FOR PAST 3 MONTHS, WITH KNOWLEDE OF UI/UX DESIGNIG, AND USAGE OF AI AGENTS, WILLINGNESS TO LEARN, GROW AND ENGAGE. CURRENTLY A FRESHER TO THE TECHNICAL FIELD, BUT WITH THE ABILITY TO ADAPT SOONER, WITH UNDERSTANDING OF BUISNESS AND MANAGEMENT

EDUCATION

2022 - 2026

FUTURE INSTITUTE OF
ENGINEERING AND MANAGEMENT

- B.TECH IN ELECTRICAL
ENGINEERING
- CGPA: 7.1

LANGUAGES

- English (Professional)
- Hindi(Fluent)
- Bengali (Fluent)

SKILLS

- JAVA
- PYTHON
- HTML
- CSS
- REACT.JS
- NODE.JS
- ANGULAR.JS
- APIS
- AUTOMATION
- SQL+NO SQL
- JAVASCRIPT
- TYPESCRIPT
- LLM
- MCP
- DEVOPS
- GIT
- AI/ML
- AWS
- UI/UX DESIGNING
- COMMUNICATION
- LEADERSHIP
- WORK ENTRUIAST

PROJECTS:PERSONAL

1.Real-Time Telemetry & Event Stream Processing Pipeline

- 1.Designed a real-time stream processing system to ingest, process, and store 10,000+ simulated sensor/telemetry events per second with sub-100ms processing latency.
2. Utilized Apache Kafka for asynchronous event queuing and Redis for distributed caching to optimize read-heavy database operations.
3. Containerized components using Docker and built a automated GitHub Actions CI/CD pipeline for cloud deployment on AWS.

2.AI-Native Backend & Knowledge Search System

1. Built a secure RESTful API backend featuring Retrieval-Augmented Generation (RAG) to query and summarize enterprise technical documentation.
2. Implemented vector embedding indexing using PostgreSQL (pgvector) to achieve high semantic retrieval accuracy over unstructured PDF/text data.
3. Implemented JWT-based access controls and Redis-backed rate-limiting to prevent API abuse and secure system endpoints.

3.Distributed Systems & Microservices Architecture

- 1.Architected a decoupled microservices-based worker execution engine to handle long-running background tasks (PDF rendering, email batching, data transformation).
2. Integrated RabbitMQ to guarantee message delivery with dead-letter queues (DLQ) for failed task retry logic.
3. Set up real-time health metrics monitoring and logging visualization using Prometheus & Grafana.

PROJECTS:INDUSTRIAL

Full Stack Web Development using java and spring boot

1. Designed a E commerce website for shopping like Myntra
2. Used HTML, RestAPIs, React.js, Node.js, TypeScript for user, admin and host interfaces

WORK EXPERIENCE

INSPIRE AI: Buiness Deevelopment Executive

1. Learning communication, customer demands and management, leadership and team management
2. Learning to be self dependent and also have bigger dreams
